

LSD for Honda DC5 & EP3 AHFB8750 / 8751 & ACHFB8750

CARBONETIC ring gear bolts are no longer provided in the kit.

In the past, CARBONETIC LSD for DC5 & EP3 came with the CARBONETIC ring gear bolts described below. However, we have decided to stop including the bolts since CARBONETIC bolts basically were same size and same strength as the stock bolts.

Please refer to the Honda service manual and either

- (1) Reuse the ring gear bolts or
- (2) Purchase new Honda genuine ring gear bolts for DC5 & EP3

Note If your ring gear bolts are shorter than the one described below (like the one used for U.S RSX with open differential), please order the bolts used for DC5 type R.
